RETROFIT A SOLUTION WITH RISKS

Replacing your old T5 and T8 tubes with retrofit lamps quickly and easily? What seems unproblematic and inexpensive can have consequences that you should consider in advance.

WHAT ARE RETROFIT AND CONVERSION LAMPS?

Retrofit lamps or conversion lamps are LED lamps that are used as replacements for previously common T5 and T8 double-ended fluorescent tubes.

LOSS OF WARRANTY AND DECLARATION OF CONFORMITY

With the use of a retrofit or conversion lamp the standard warranty of the original manufacturer of the luminaire is lost, the operating licence including conformity and warranty of the retrofitted product expires.

LOWER OVERALL ECONOMY OF YOUR LIGHTING

Cheaper to buy, but with higher power consumption, retrofit lamps can also severely impact the life of your lighting.

COMPROMISING ON LIGHT QUALITY

LED complete luminaires are an overall system designed to continuously deliver the maximum quality of light with the highest efficiency. This quality cannot be achieved with retrofit lamps.

NO FUNDING

The mere replacement of light sources is excluded from most state fundings.
