

Intricate and unobtrusive, yet eye-catching - The Filigree series

For a round, accentuated lighting pattern

Filigree was awarded the German Design Award in 2019 for its extraordinary design and high functionality.

With Filigree, LTS presents a new, decorative, delicate and individually controllable luminaire series. The central design element of the Filigree family is the unusual light head with its round and intricate light ring. The new luminaire is available in different variants - table, free-standing and pendant.

Moreover, Filigree features a light ring that can pivot through 90°, LEDs over 325°, as well as innovative heat management using integrated passive cooling in an aluminium head part. The slender vertical tube is made from powder-coated steel and provides a consistent design language. Particularly due to its unique round shape and excellent light quality, Filigree stands out as being extremely efficient and functional. Thanks to the intelligent size, Filigree can forgo the cumbersome power adapter outside the luminaire.

The Filigree Pendant version stands out especially in the group. The ring on the luminaire head can be pivoted through 90°.

In 2019, the Filigree luminaire series won a German Design Award in the Excellent Product Design category, with the jury describing it as “a beautiful design that is both eye-catching with its clean, flowing lines and geometric design language, as well as functional with the flexible alignment of the shade and excellent light quality.”

The Filigree design was created by 2DODESIGN in Stuttgart. The idea behind the design was “to see the light and the luminaire together as a common design element and thereby reduce it to clear forms.” In 2018, the luminaire series was a winner at the Iconic Awards: Innovative Interior.

Particularly with a combination of all the variants, Filigree offers a unique atmosphere in hospitality. Its lean size can be discreetly integrated in modern interiors and still works as an eye-catching piece. Thanks to its touch technology for the table and free-standing variants, it can be individually dimmed via the vertical tube.

The pendant luminaire is provided with a track-mounted connection or the classic recessed fitting. It is a thoroughly eye-catching piece by itself or in a group of different lengths.
